

Solutions for Logistics and Warehousing

Accpac Solutions in Africa

It is impressive to know that after 20 years in Africa, Softline ACCPAC continues to deliver again and again in our ever changing world. A world that unflinchingly demands the highest level of service and latest technology to deliver lasting benefits and reduced cost of ownership. Softline ACCPAC provides this with a scalable set of solutions which allow you to grow, from the modular Sage ERP Accpac suites into our web based all-in-one ERP solution, Sage ERP X3.

Softline ACCPAC's suite of solutions follow your pace of growth, adapting to your unique requirements, deferring to your choice of database and deployment preferences while flexing with your organisational structure. Softline ACCPAC's range of mid-market and enterprise solutions provide full service enterprise management software capable of meeting the most elaborate business processes whilst remaining simple to use.

Softline ACCPAC solutions are powerful toolsets that help you confidently streamline time-consuming financial (GAAP and IFRS) and operational processes using advanced workflow, alerting and business process management technologies. Moreover, the breadth of Softline ACCPAC's solutions extend to supply chain management, warehousing/logistics, service management and mixed mode manufacturing with quality control and document management.

Needless to say Softline ACCPAC provides award winning CRM functionality as an integrated or stand alone offering to all our ERP customers delivering classic CRM components including sales force automation, customer care, marketing including emarketing and web self service portals.

Regardless of your role within your company or your business challenges, Softline ACCPAC has the right solutions for you to improve and extend your reach through collaboration with customers, suppliers and stakeholders to manage the entire lifecycle of a customer from first contact to final contract.

Managing a well oiled logistics operation without breaking the bank

High demands for better customer service, a very competitive landscape, and constant regulation changes all make the operation and provision of transport and logistics services a management challenge.

Understanding that Transport & Logistics companies have different needs from other organizations, our software offers a choice of solutions ranging from powerful ERP functionality, integrated warehousing, supply chain and logistics management, packing and quality assurance checking.

The key features that drive the success of an ERP implementation in this environment include:

- **Logistics and Warehousing:**
 - o Advanced pick, pack and put-away rules facilitating multiple bins and location management, reducing manual intervention and increasing effectiveness.
 - o Management of loads by weight, volume or a combination thereof.
 - o Enablement of picking in bulk or pack size options, polarisation and shrink-wrapping.
 - o Handling of perishables, shelf-life days, expiry dates or controlled temperature environments.
 - o Powerful quality control and inspection management.
 - o Fully integration with RFID scanners and weighing scales, further tightening controls and streamlining efficiency.
 - o Integrated stock management, counting and controls giving users granular control over stock situations.

For more information please feel free to contact us on strategicsales@accpac.co.za, for a free needs assessment or product presentation tailored to your needs.

- **Operational:**
 - o Easy to use web interface that utilizes graphically illustrated business process flows, reducing the processing time and burden on employees.
 - o Convenient graphical Dashboarding allowing users a snapshot of the data in their specific area of responsibility.
 - o Multiple language interface, making the system easier to use for both users and support staff.
 - o Powerful web based architecture, further enabling distributed operation and ease of rolling out to distributed locations.
 - o Powerful Webservices functionality allowing 3PL and 4PL companies to integrate into their clients individual ERP systems reducing the risk of manual errors.
- **Financial:**
 - o Fully integrated financial modules allow the seamless transfer of data between the operational and financial modules.
 - o Full BI capability, giving users easy to understand reports that are delivered on time.
 - o Multiple currency and legislation management.
 - o Detailed security rights for users and audit trails further strengthening system security and transparency and reducing the risk of fraud.
